

Virginia Valentine's firsthand experience and knowledge of environmental monitoring systems will provide attendees an excellent opportunity to learn more about operating and maintaining flood warning systems in challenging times. She also brings interesting insight into management of diverse groups and interests.

Ms. Valentine was the first Chief Engineer and General Manager of the Clark County Regional Flood Control District when it was created in 1986, and their ALERT system was established. She was also Las Vegas' City Manager, County Executive of Clark County and a Senior Vice President at a national consulting engineering firm. She holds a master's of public administration from UNLV and a civil engineering degree from the University of Idaho. She is a registered professional engineer in Nevada.
